II. Who are our visitors? How do they interact with the website?

III. How do users move within the store?

IV. How is the online store performing?

V. Insights & Recommendation

Scope

This project focuses on analysing the performance of the Google Merchandise Online Store from January 1st to October 31st, 2025. The initial analysis will begin with an overview of the entire website and will focus on:

Engagement

Analyzing which pages and events generate high/low engagement.
Reviewing specific product categories for performance.

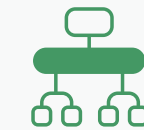

Trends

Exploring geographic, demographic, and seasonal behaviors to inform marketing efforts for the 2026 roadmap.

Segments

Identifying loyal and returning users.
Creating personas that contribute the most value and revenue potential.

Channels

Evaluating the performance of traffic sources and acquisition channels to optimize spend.

Business Goals

Maximize Conversions

Analyse and optimize every step of the purchasing funnel to ensure the conversion rate is maximized and cart abandonment is minimized.

Increase Awareness

Boost brand visibility among the target audience, ensuring greater exposure, recognition, and reach through channels and content that expand the brand's presence in the market.

Create Loyalty

Focus on building long-term loyalty by understanding the factors that motivate users to return. The objective is to increase purchase frequency and Customer Lifetime Value (LTV).

Increase Engagement

Drive deeper user interaction with the brand by providing more relevant and engaging experiences, increasing the frequency, depth, and quality of actions taken on the website and across other touchpoints.

Target Audience Growth

Strengthen user retention and overall satisfaction by increasing the proportion of returning visitors while enhancing the site's user experience through improved performance, navigation, and content clarity.

Analytics Framework

	Business Goal	KPI	Target Value	Segment
	Maximize Conversions	E-Commerce Conversion Rate and Funnel Conversion Rate Number of transactions Exit rate on product page Exit rate at checkout	+20% Revenue -10% Exit rate	People who are between 18-65+
	Increase Awareness	Number of page visits Users by organic search Users by paid search	+20% Traffic	People who are between 18-65+
	Create Loyalty and Increase Engagement	Number of returning visitors	+10% Returning Visitors	Users who have already visited the site
		Average page load time	1-2 seconds average load time	
	Increase Engagement	Average online session engagement (Current: 52s)	1min / +15,38% Average online session engagement	People who are between 18-65+
		Pages/session (Current: 3.48)	4.0 / +15% Pageviews	
		Conversion rate of the "Newsletter subscription" goal	10%	
	Target Audience Growth	Number of female users (Current: 72,134 female vs. 105,328 male)	+~40% (100,000 female users)	Female users

Macrostructure

	E-commerce	Analysis
Homepage (Landing page)	Discovery & Direction Welcomes the user, distributes traffic across key categories, and highlights seasonal campaigns or featured items.	Traffic distribution; Effectiveness of banners and featured content; Bounce rate and early navigation behaviour.
Category Pages (Product listing)	Exploration & Navigation Help users explore products by browsing categories, using filters, or performing internal searches.	Performance of categories and filters; Effectiveness of internal search; Percentage of users advancing to Product Detail Pages (PDPs).
Product Detail Pages (PDP)	Consideration & Intent Provide all the information needed to turn interest into intent and encourage the “Add to Cart” action.	Add to Cart click-through rate; Engagement with images, reviews, and product descriptions; Identification of low-performing products or those requiring content review.
Cart Page (Purchase Review)	Transition & Pre-Conversion Allows the user to review the order, apply promo codes, and proceed to checkout.	Cart abandonment rate; Impact of shipping costs or additional fees; Progression from Cart → Checkout.
Checkout Pages	Conversion Collect essential data (address, shipping, payment) in a smooth, frictionless process.	Step-by-step checkout funnel performance; Detection of friction points and drop-offs; Time to complete checkout and recurring errors.
Order Confirmation / Thank You Page	Confirmation & Tracking Validates that the purchase is complete and ensures the conversion event is properly recorded.	Official measurement of the Conversion Rate; Opportunities for upsell or sharing (when applicable).
Support / Help Pages	Trust & Loyalty Provide FAQs, return policies, and customer support information to reduce uncertainty and build trust.	Indicators of customer satisfaction and information needs; Relationship between support usage and conversion or retention.
My Account / Profile	Loyalty & Long-Term Provides returning users with access to personal data, order history, preferences, and account settings.	Behavior of returning users; Contribution to LTV and purchase frequency.

Who are our visitors?

**How do they interact with
the website?**

Engagement Performance Summary

The Google Store performs well in engaging users, yet repeat visits are relatively low

Total Users
688K

Active Users
682K

Return Users
106K

Total Event Count
14M

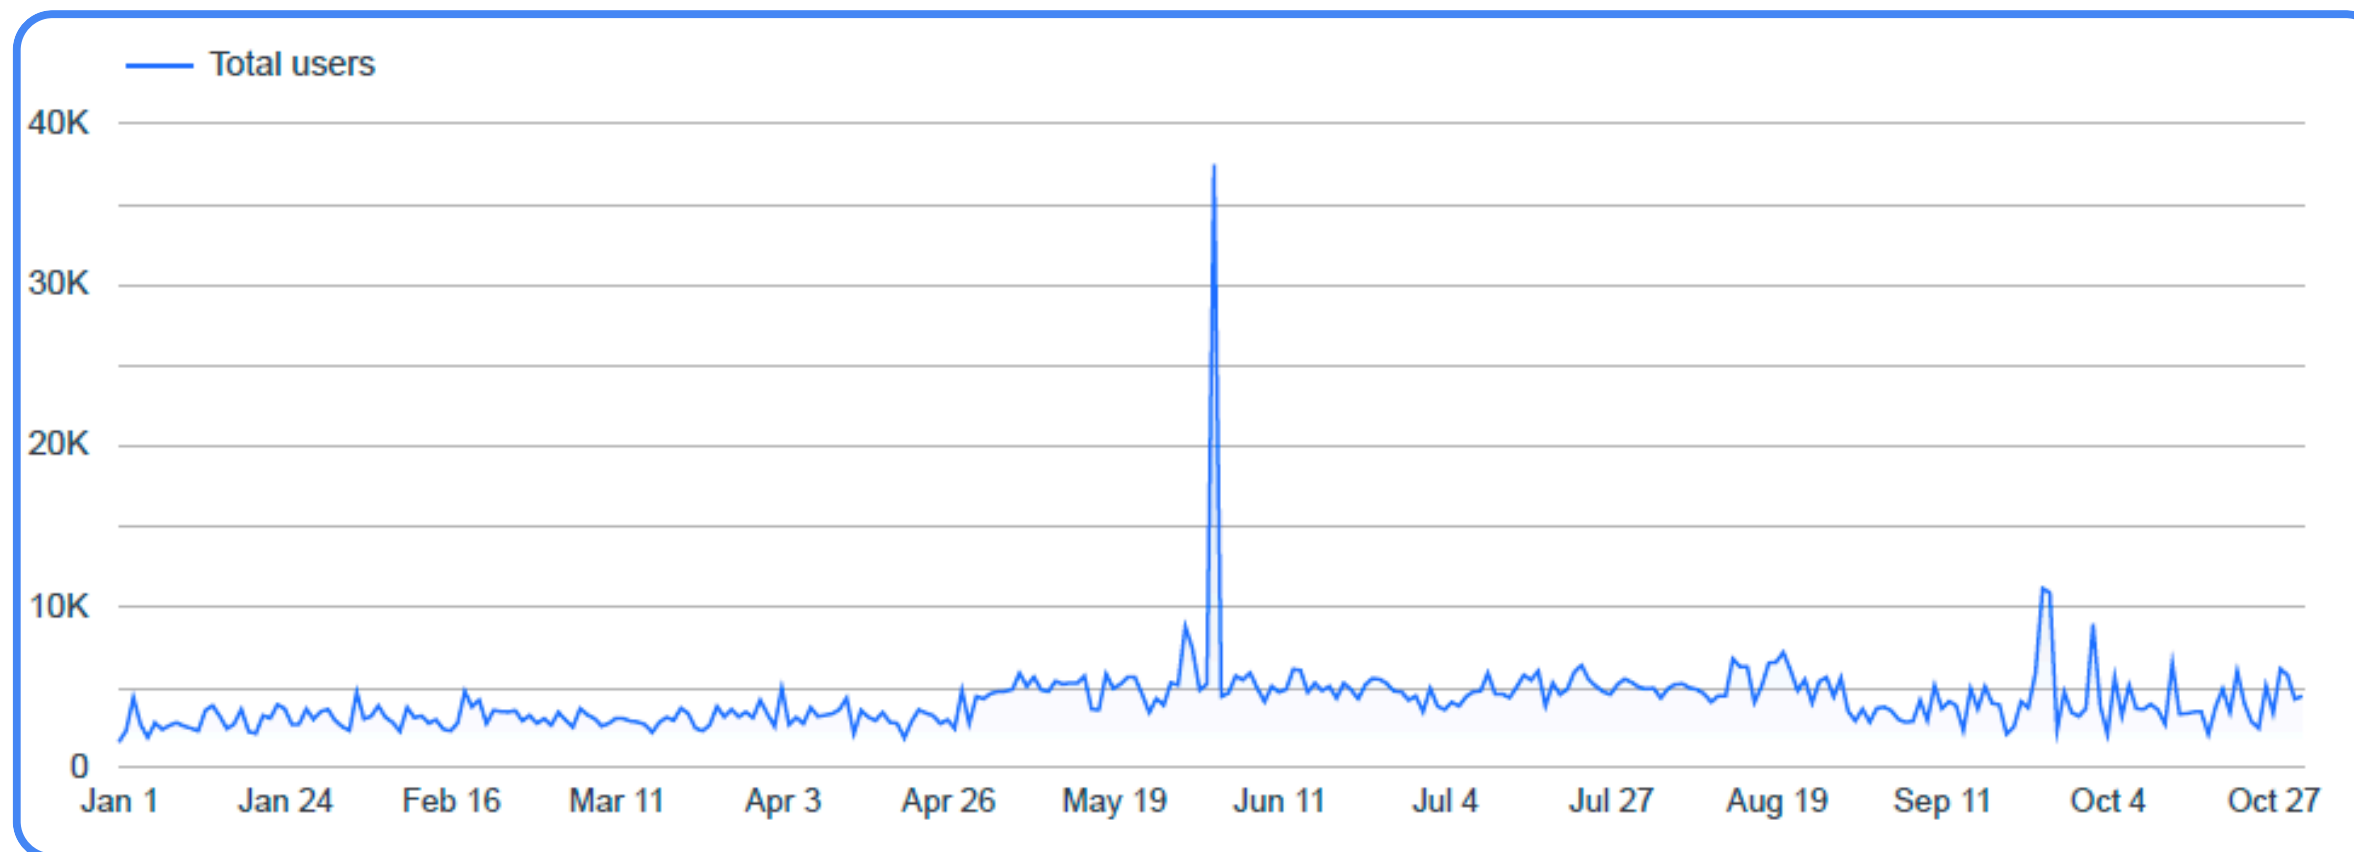

Fig.1. User Activity on the Website from January 1st to October 31st of 2025.

Users are highly engaged when visiting the Google Store, but only 15.4% return which is below typical ecommerce benchmarks (25–35%). This suggests that while the site captures attention well, there is an opportunity to strengthen retention and encourage repeat visits.

On June 2nd, total users spiked to nearly 40K, with most traffic classified as Direct and landing on a “(not set)” page. This pattern may reflect a GA4 tracking issue, reviewing tagging and analytics setup is recommended to ensure accurate data.

Engagement Potential

Engagement and time spent are below expectations, highlighting opportunities for improvement

Engaged Session
472K

Average Engagement
Time Per Session
52s

Engagement Rate
47.03%

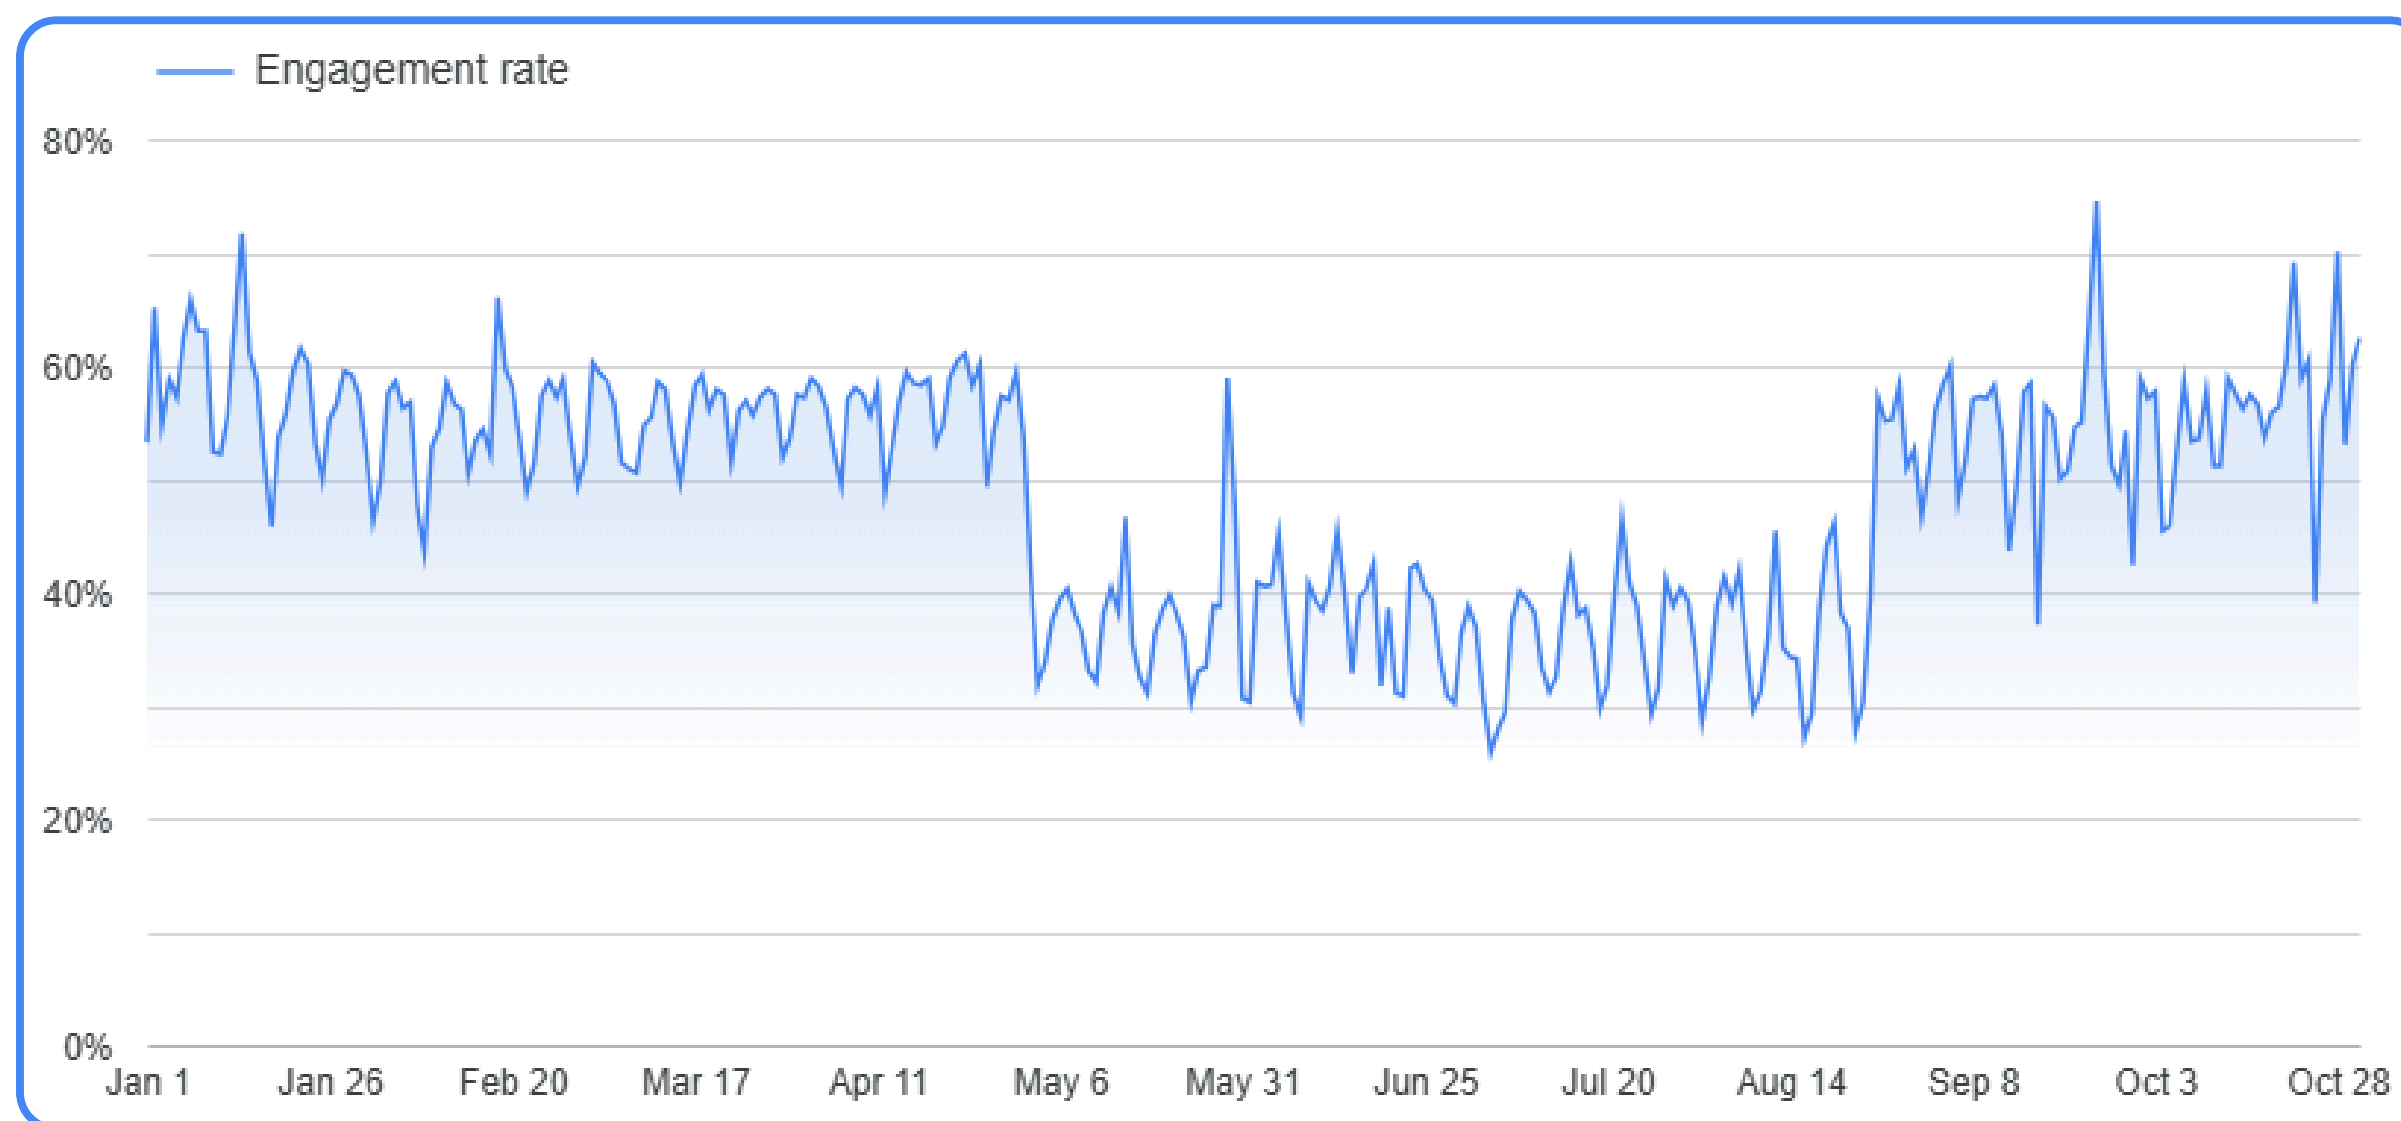

Fig.2. User Engagement on the Website from January 1st to October 31st of 2025.

Engagement decreases during summer months, suggesting the store may be more strongly linked to office and school-related demand. Broadening product visibility or validating user intent through a short survey could help sustain engagement year-round and uncover key insights.

Engagement peaks before Halloween, Black Friday, and the start of the school year, highlighting key periods to activate promotional bundles and campaigns.

Country	Active users	New users	Engaged sessions	Engagement rate	Engaged online sessions per active user	Average online active user engagement time
Total	682,165 100% of total	691,955 100% of total	472,026 100% of total	47.04% Avg 0%	0.69 Avg 0%	1m 17s Avg 0%
1 United States	260,043 (38.12%)	236,933 (34.24%)	280,063 (59.33%)	60.84%	1.08	2m 16s
2 (not set)	190,543 (27.93%)	231,058 (33.39%)	5,363 (1.14%)	2.83%	0.03	0s
3 India	48,389 (7.09%)	46,345 (6.7%)	40,933 (8.67%)	61.14%	0.85	1m 03s
4 China	34,708 (5.09%)	39,554 (5.72%)	20,484 (4.34%)	47.11%	0.59	15s
5 Canada	25,958 (3.81%)	23,650 (3.42%)	24,788 (5.25%)	57.58%	0.95	1m 37s
6 Japan	12,743 (1.87%)	11,593 (1.68%)	11,538 (2.44%)	53.51%	0.91	1m 44s
7 Taiwan	9,374 (1.37%)	8,964 (1.3%)	10,472 (2.22%)	58.69%	1.12	2m 38s
8 South Korea	8,658 (1.27%)	7,605 (1.1%)	8,110 (1.72%)	50.91%	0.94	1m 32s
9 Brazil	6,718 (0.98%)	6,264 (0.91%)	6,249 (1.32%)	58.74%	0.93	1m 43s
10 Singapore	6,481 (0.95%)	5,866 (0.85%)	5,919 (1.25%)	55.49%	0.91	1m 41s

Fig.3. User Engagement Metrics by Country

The **United States** dominates **traffic at 38.12%**, maintaining a high **engagement time (2m 16s)** that reinforces its status as the most valuable audience.

Meanwhile, **Taiwan** offers the highest browsing quality, leading in **session frequency (1.12)** and **duration (2m 38s)**, which represents a strategic opportunity for expansion.

In contrast, the "(not set)" traffic accounts for **28% of users** but shows 0 interaction, likely indicating **spam**, configuration errors, or VPN usage rather than real user activity.

China has a critical interaction time of only 15 seconds, suggesting technical accessibility issues or severe cultural barriers. India, the third largest market in terms of volume, remains below the global average for engagement, revealing potential for growth if content is better adapted to the local audience.

User acquisition

Channel distribution

First user prim...Channel Group) +		Total users	↓ New users	Key events All events	Total revenue
Total		687,457 100% of total	691,955 100% of total	809,608.00 100% of total	\$2,014,100.16 100% of total
1	Direct	467,707 (68.03%)	464,512 (67.13%)	492,953.00 (60.89%)	\$1,403,203.40 (69.67%)
2	Organic Search	151,486 (22.04%)	155,603 (22.49%)	152,433.00 (18.83%)	\$273,797.29 (13.59%)
3	Paid Search	36,057 (5.24%)	36,197 (5.23%)	55,866.00 (6.9%)	\$67,765.66 (3.36%)
4	Cross-network	11,903 (1.73%)	11,970 (1.73%)	36,768.00 (4.54%)	\$113,607.44 (5.64%)
5	Referral	11,203 (1.63%)	10,222 (1.48%)	37,981.00 (4.69%)	\$78,539.31 (3.9%)
6	Unassigned	4,726 (0.69%)	4,662 (0.67%)	3,694.00 (0.46%)	\$2,876.88 (0.14%)
7	Email	4,426 (0.64%)	3,882 (0.56%)	18,765.00 (2.32%)	\$46,666.41 (2.32%)
8	Organic Social	2,887 (0.42%)	2,793 (0.4%)	6,938.00 (0.86%)	\$12,184.38 (0.6%)
9	Organic Shopping	2,071 (0.3%)	2,058 (0.3%)	4,188.00 (0.52%)	\$15,459.39 (0.77%)
10	Organic Video	38 (<0.01%)	36 (<0.01%)	22.00 (<0.01%)	\$0.00 (0%)

Fig.4. User Acquisition by Channel Group

The platform's growth is anchored by **Direct and Organic Search**, which together generate over **75% of total revenue** and validate strong brand authority. While **Direct traffic** accounts for **68.03% of the user base**, high-intent channels like **Paid Search (30.99%) and Referrals (34.48%) are significantly more efficient** at converting traffic into actions. Despite this massive reach, the overall **Engagement Rate of 47.04%** suggests a high volume of low-interaction traffic, emphasizing the need to prioritize high-efficiency channels over raw volume.

Junk Traffic vs. Qualified Traffic

Session primary...Channel Group) +		Sessions	Engaged sessions	Engagement rate	Average online session engagement
Total		1,003,545 100% of total	472,026 100% of total	47.04% Avg 0%	52s Avg 0%
1	Cross-network	15,801 (1.57%)	13,150 (2.79%)	83.22%	1m 54s
2	Organic Social	6,934 (0.69%)	4,667 (0.99%)	67.31%	1m 35s
3	Referral	27,493 (2.74%)	20,234 (4.29%)	73.6%	1m 35s
4	Email	19,315 (1.92%)	13,957 (2.96%)	72.26%	1m 31s
5	Organic Shopping	3,134 (0.31%)	2,282 (0.48%)	72.81%	1m 21s
6	Paid Search	57,627 (5.74%)	39,975 (8.47%)	69.37%	1m 21s
7	Organic Search	241,233 (24.04%)	147,585 (31.27%)	61.18%	57s
8	Unassigned	52,800 (5.26%)	3,700 (0.78%)	7.01%	55s
9	Direct	564,437 (56.24%)	226,844 (48.06%)	40.19%	42s
10	Organic Video	50 (<0.01%)	20 (<0.01%)	40%	35s

Fig.5. Session Quality and Engagement by Channel Group

Therefore, it is necessary to prioritize investment in high-engagement channels, such as **Cross-network** and **Referral**, optimize the **Direct channel** for quick conversions, and eliminate low-quality Unassigned traffic to protect your ROI.

Qualified Traffic

- **Cross-network:** This is the most qualified channel, as it has the highest engagement rate (83.22%) and the longest average session time (1m 54s).
- **Referral:** Very solid, with 73.6% engagement and 1m 35s duration.
- **Email and Organic Shopping:** Both have rates above 72%, which indicates that those who click on these links know exactly what they will find and interact with the site.

Junk Traffic

- **Unassigned:** This indicates junk traffic or a tracking error. It has 52,800 sessions, which is a considerable volume, but a very low engagement rate of only 7.01%. The user enters and exits almost instantly without performing any activity.
- **Direct:** Although it is the channel that generates the most sessions (564,437), it has one of the lowest engagement rates (40.19%) and the shortest dwell time (42 seconds) among the main channels.

User acquisition

Device distribution

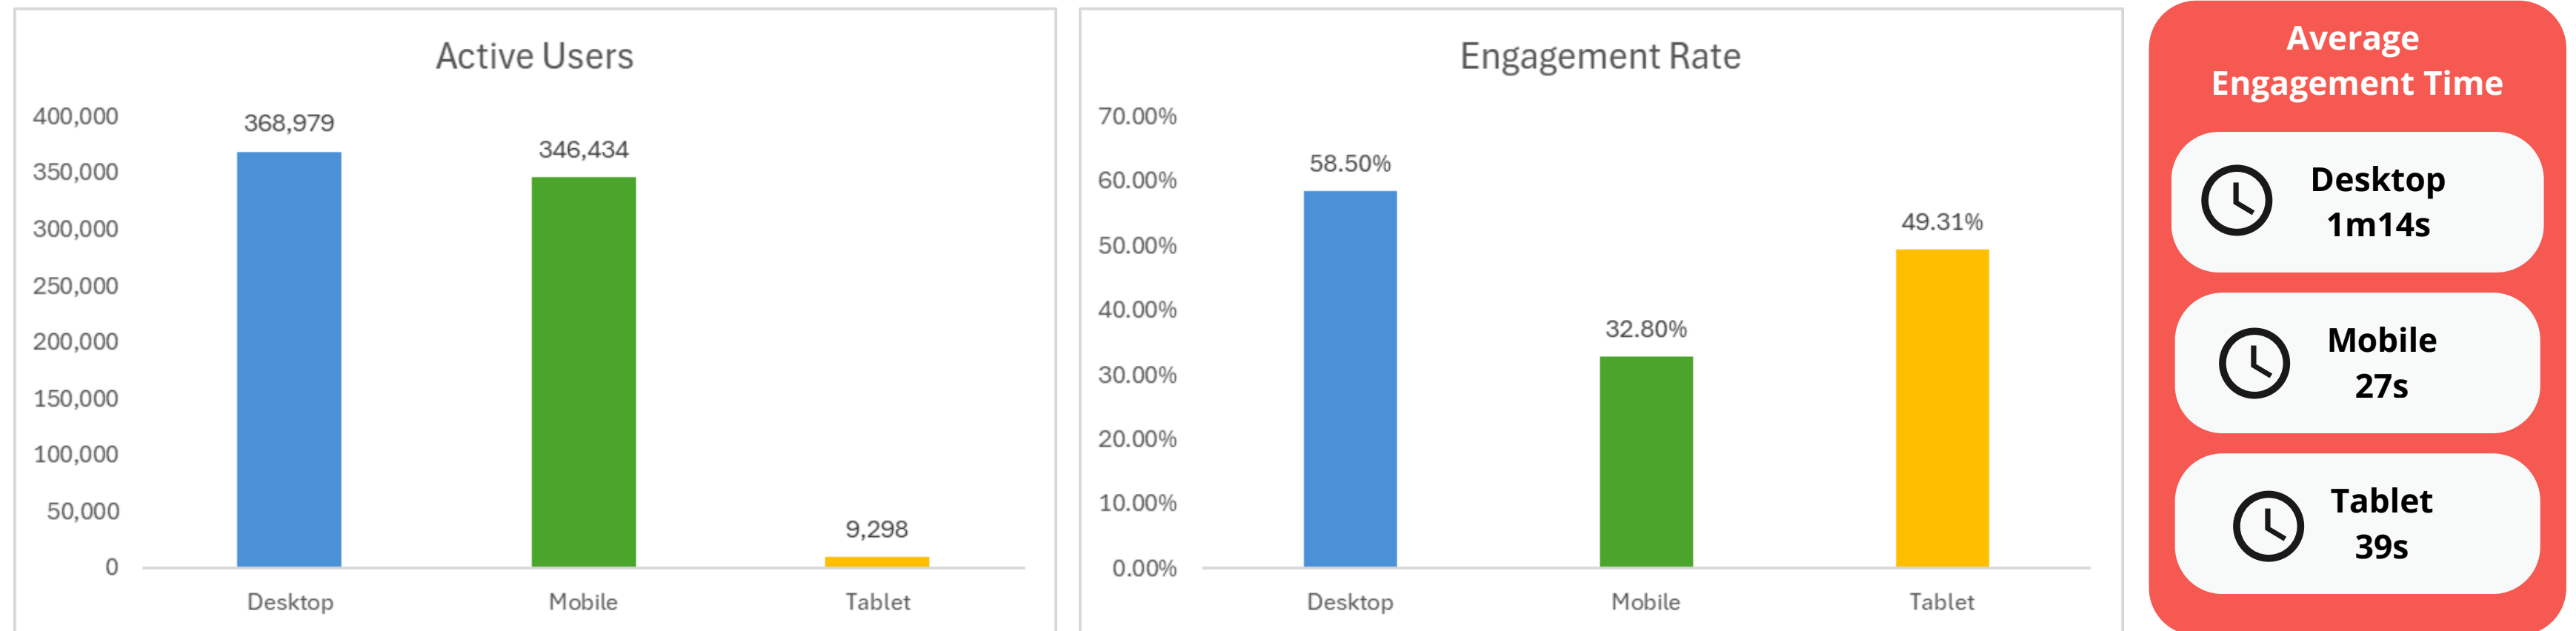

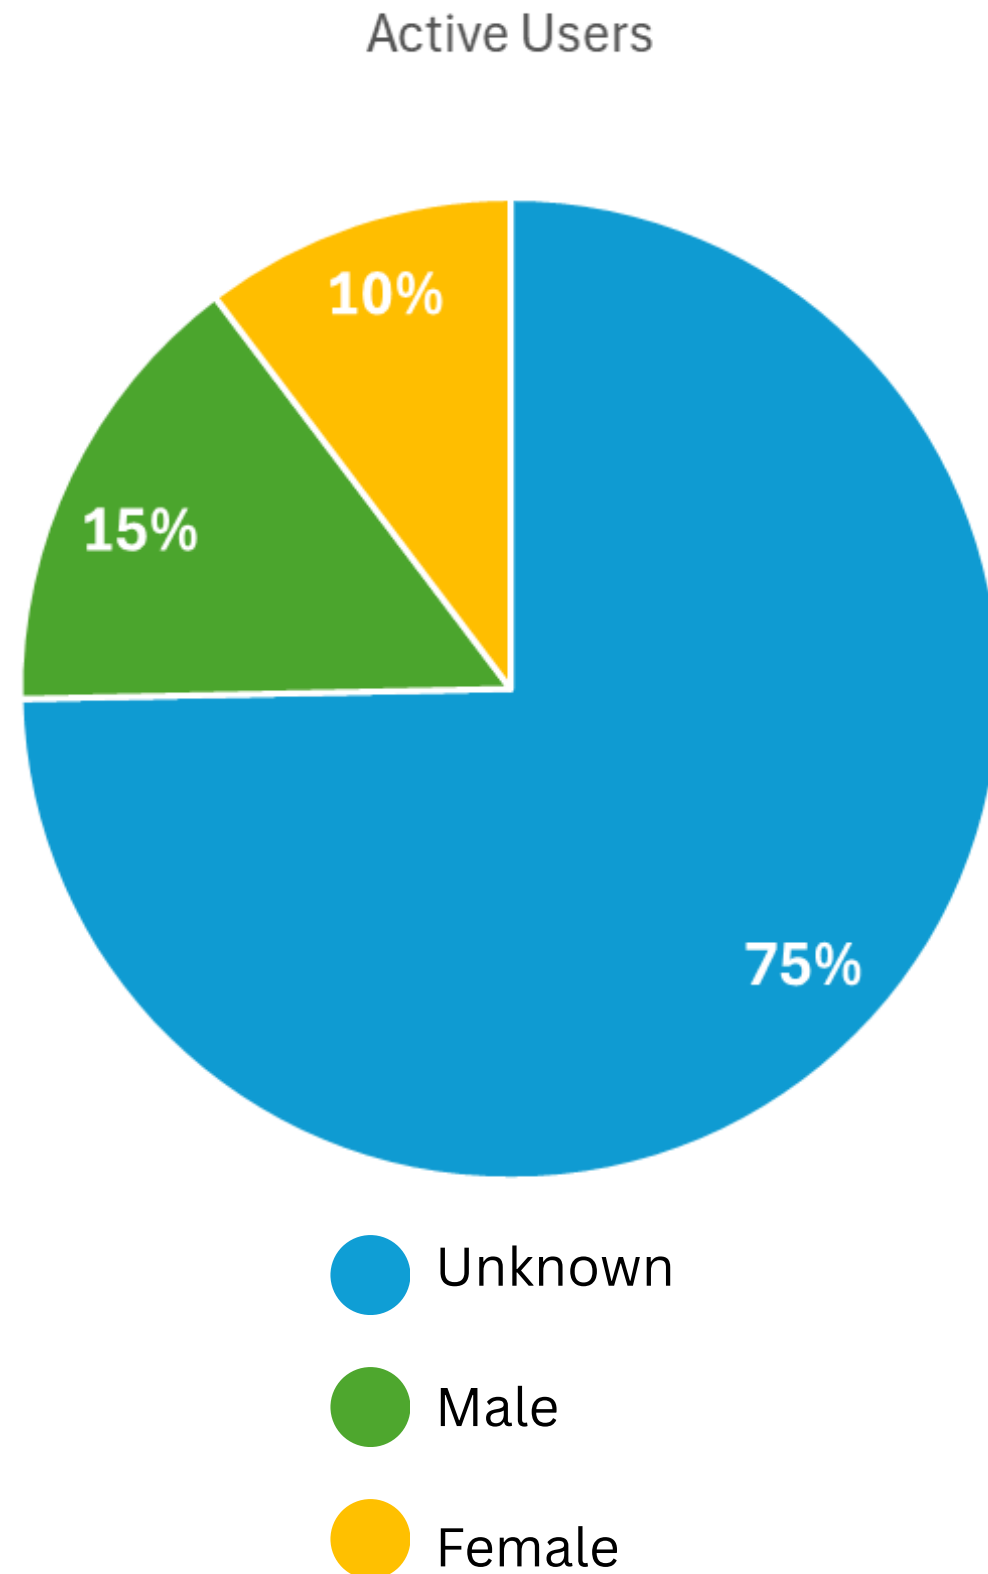

Fig.6. User Metrics by Device Type.

While user base is split almost equally between Desktop and Mobile, the engagement story is very different. Desktop is the most efficient channel, with a 58.5% engagement rate and over a minute of activity. Mobile drives high volume but suffers from significant drop-off, with engagement lasting only 27 seconds. Interestingly, Tablets (despite being the smallest segment) actually outperforms mobile in quality, with a 49.31% engagement rate and 39 seconds of activity. This confirms that the mobile issue isn't just about 'smaller screens,' but likely specific UX barriers in the mobile interface that must be addressed. Strategic success depends on optimizing the mobile experience to ensure that discovery-phase engagement translates into final sales.

Gender

- 75% of users are classified as Unknown, creating a major blind spot in persona mapping, likely driven by optional registration fields and tracking limitations.
- Within the 25% of identified users, the observed gender split is 3:2 Male to Female. This provides directional insight that the store might be more appealing to male shoppers and need to focus on measures to increase their female segment.
- To reduce the “Unknown” segment, implementing progressive profiling to collect voluntary user attributes over time and use privacy-compliant third-party enrichment to enhance contextual and behavioral insights, without increasing sign-up friction, is recommended.

Fig.7. Active Users by Gender between January 1st and October 31st of 2025

Men's Engagement

Men have good quality engagement rates and spend time on New and Men's/Unisex and the check-out pages, spending around 2 minutes per session. They also take slightly longer on the Check-Out page, showing careful review before completing purchases. Overall, men are exploring key product pages thoroughly, demonstrating strong interest and purchase intent.

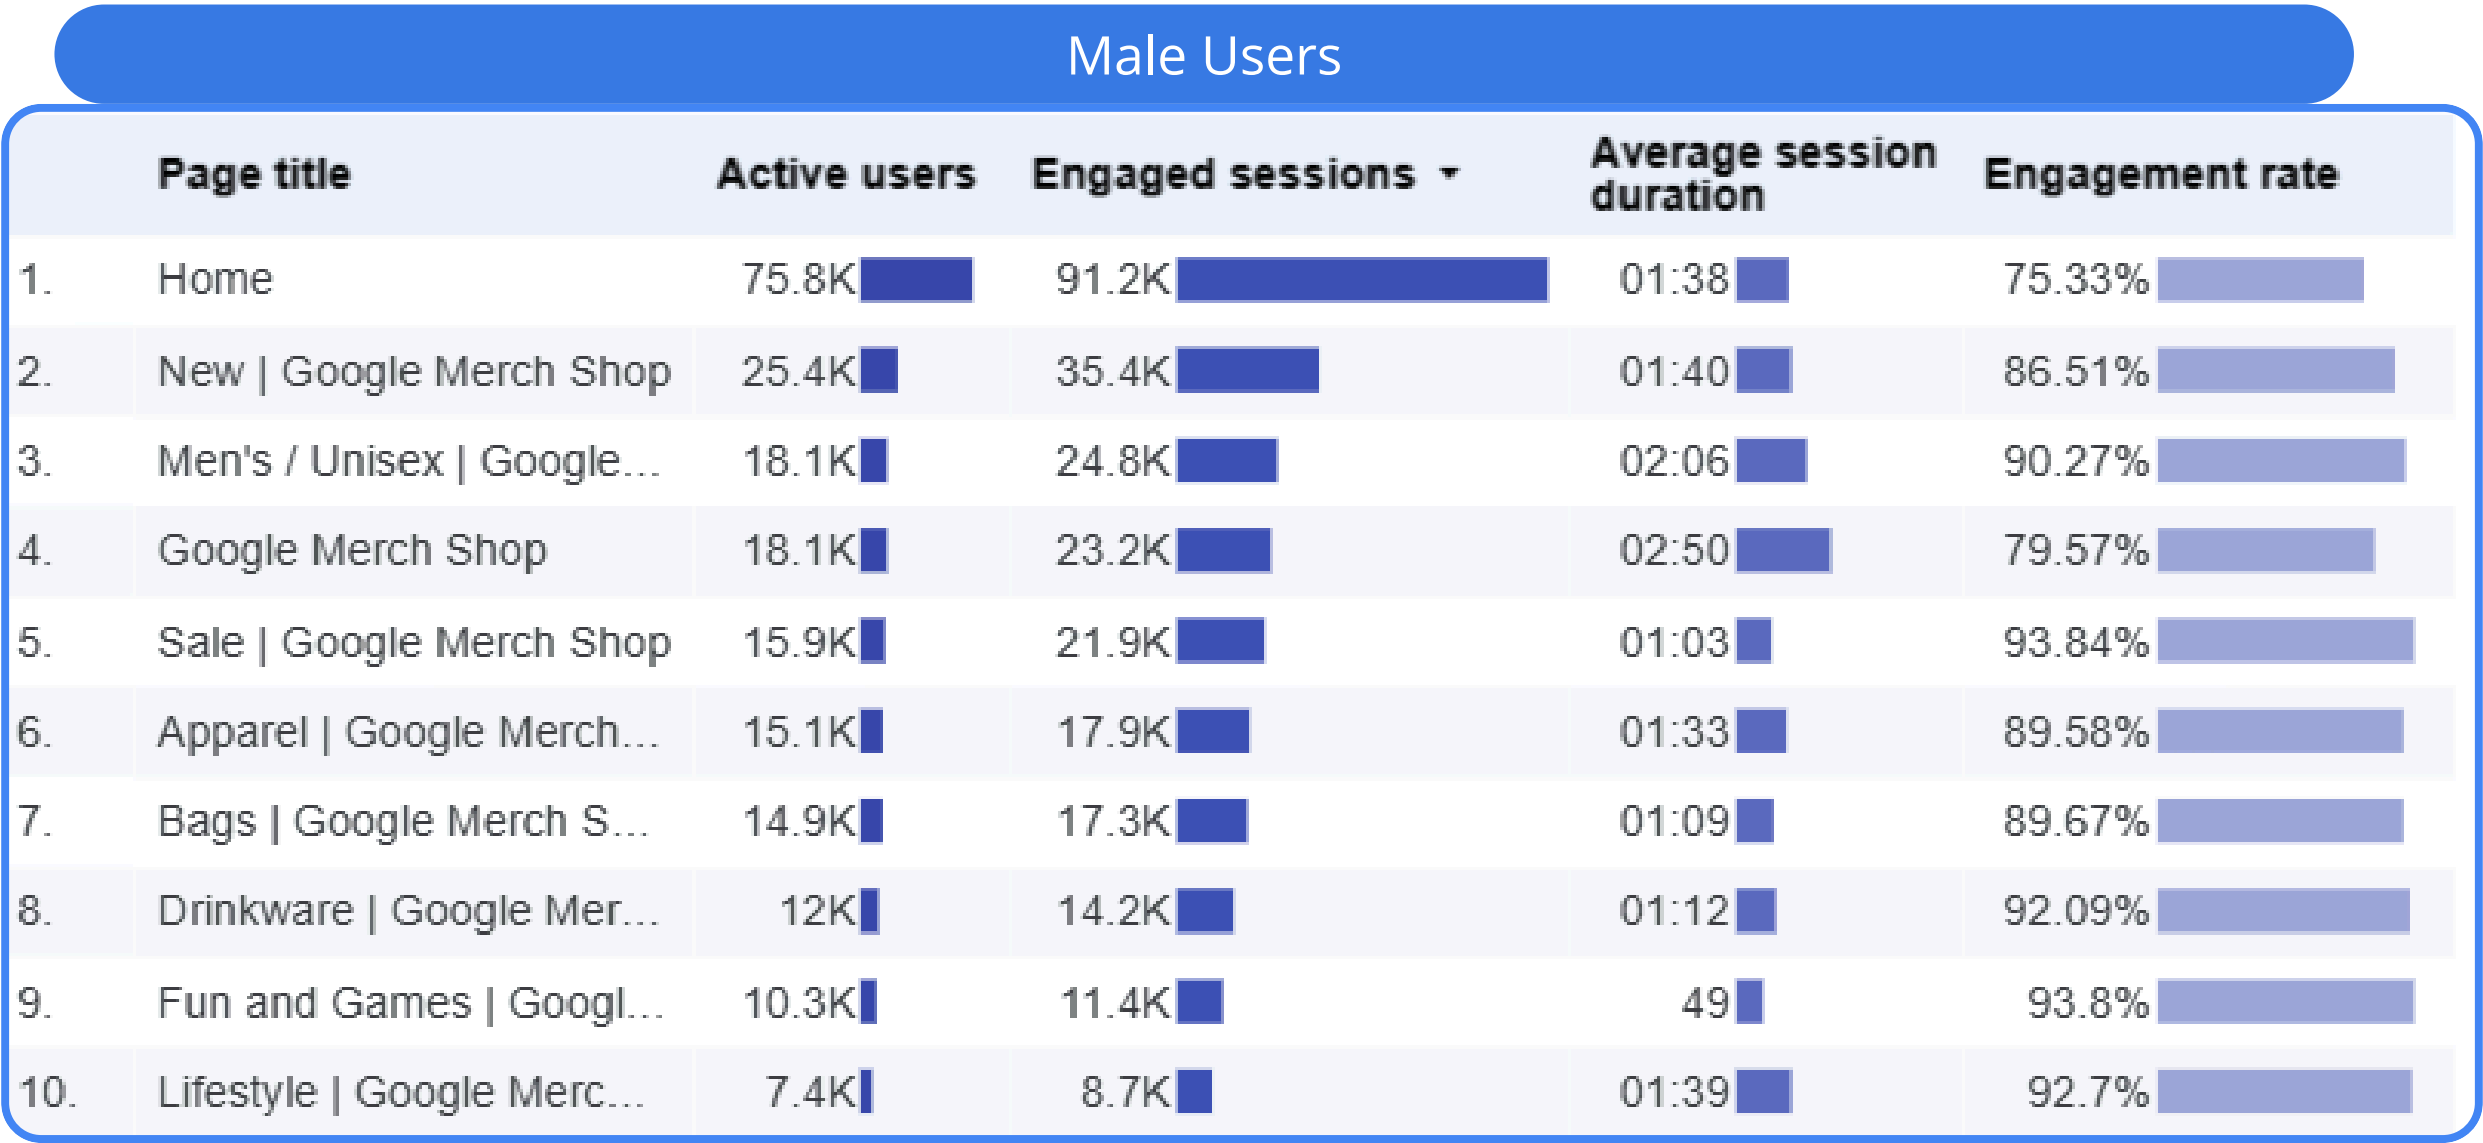

Fig.8. Male Engagement Throughout the Website.

Women's Engagement

Women make up a smaller share of sessions but are just as engaged as men, and even have longer periods in the check-out page demonstrating their likelihood to purchase their products. The Women's section ranks 9th in engagement, three pages behind Men's/Unisex, highlighting that the Women's section may not feature enough appealing items. Women tend to explore New and then Sale pages more, showing interest in fresh or trending products. Overall, engagement is strong, with most pages near 90%, but there's an opportunity to strengthen the Women's section to better meet their preferences and capture attention earlier in the shopping journey. To address this, consider: expanding or highlighting Women's product offerings; making it easier to find and explore products on the Women's page; promoting gift or unisex options to better support cross-shopping

Female Users

Fig.9. Female Engagement Throughout the Website.

Engagement Distribution Throughout the Store Website

Engagement is split between the Home and Check-Out pages, which drive most engaged sessions, with four key pages (New, Men's/Unisex, Sales, and Apparel) also capturing notable attention

Fig.10. Heatmap of Engagement Distribution of the top 20 pages of Google Merch Store.

Page Engagement Trends

Product pages show strong engagement, especially Men’s/Unisex, Apparel, and Lifestyle, while Home and Check-Out pages have lower engagement rates and shorter session durations. This combination highlights potential risks of visitors abandoning pages or leaving items in the cart

Page title		Active users	Views	Views per session		Event count	↓Engaged sessions	Average engagement time per session	Engagement rate
Totals		682,165	3,493,545	3.48		13,666,208	472,026	52s	47.04%

9 YouTube Google Merch Shop	22,006	9,062	9,263	14.69%
10 Lifestyle Google Merch Shop	26,652	4,201	8,088	14.54%

Fig.12. User Entrances and exits per top 10 google store pages.

The Home page has a high bounce rate, which is crucial to reduce, as it may indicate the page isn't captivating attention, is too complicated, or takes too long to load.

While GA currently doesn't track page load time, setting this up is recommended to better understand potential performance issues.

Consider also design changes and attention-grabbing features to keep shoppers engaged, such as:

- Highlighting popular products or promotions on the Home page
- Streamlining pages for an easier browsing experience
- Testing layout, visuals, or call-to-actions to encourage retention and deeper exploration

Returning Engagement

Returning users show higher engagement and interactions on product and Check-Out pages

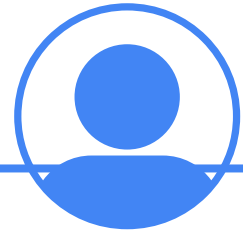

Segment		New Users							returning Users						
Page title		Active users	Views	Views per active user	Event count	↓ Engaged sessions	Average engagement time per session	Engagement rate	Active users	Views	Views per active user	Event count	Engaged sessions	Average engagement time per session	Engagement rate

Fig.13. User Engagement of Returning Users.

Returning users are more engaged and interact more with products and the Check-Out process, making them more likely to complete a purchase. Since they currently make up only 15% of total users, focusing on them with targeted promotions, discounts, or special offers could help increase sales.

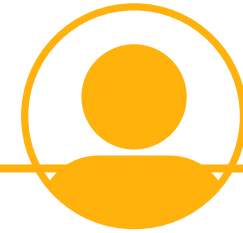

Persona Identification

Returning users show higher engagement and interactions on product and Check-Out pages

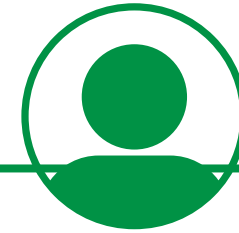

The High-Value Domestic Loyalist

Represents the store's most valuable and consistent customers. Primarily based in the United States, they are users with high engagement rates and long sessions. They browse deeply across Men's / Unisex, Apparel, and New arrivals, often entering via email or organic search. Their behavior indicates strong brand familiarity and deliberate purchasing, making them the core revenue-driving audience.

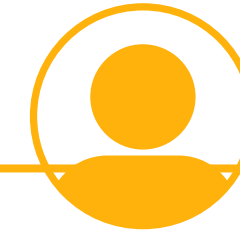

The International Quality Explorer

Reflects high-quality international traffic, led by users in Taiwan. Although smaller in volume, they demonstrate the longest session durations and highest session frequency. Their behavior signals strong brand interest and represents a strategic opportunity for international market expansion.

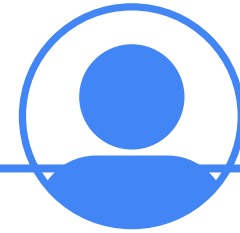

The Fast-Paced Mobile Explorer

Accounts for a large share of traffic but shows low engagement and high exit rates. Predominantly new users on mobile devices, they spend very little time on the site and often leave from the Home page. Their behavior suggests discovery-driven intent, likely from social or direct channels, but mobile UX friction prevents them from progressing further into the funnel.

The Intent-Driven Shopper

Represents the known, high-intent portion of the audience, currently skewing male. They spend close to two minutes per session and focus on New, Men's / Unisex, and Checkout pages. Their longer checkout time suggests careful decision-making and a high likelihood to convert once confidence is established.

The Trend-Seeking Female Shopper

A smaller but highly engaged segment with strong purchase potential. Female users show engagement levels comparable to male shoppers and spend significant time on Checkout pages. They are drawn to New and Sale sections and respond to fresh or trend-led products. Improving the Women's category experience represents a clear growth opportunity for this segment.

**How do users move within
the store?**

Behavioural Flow

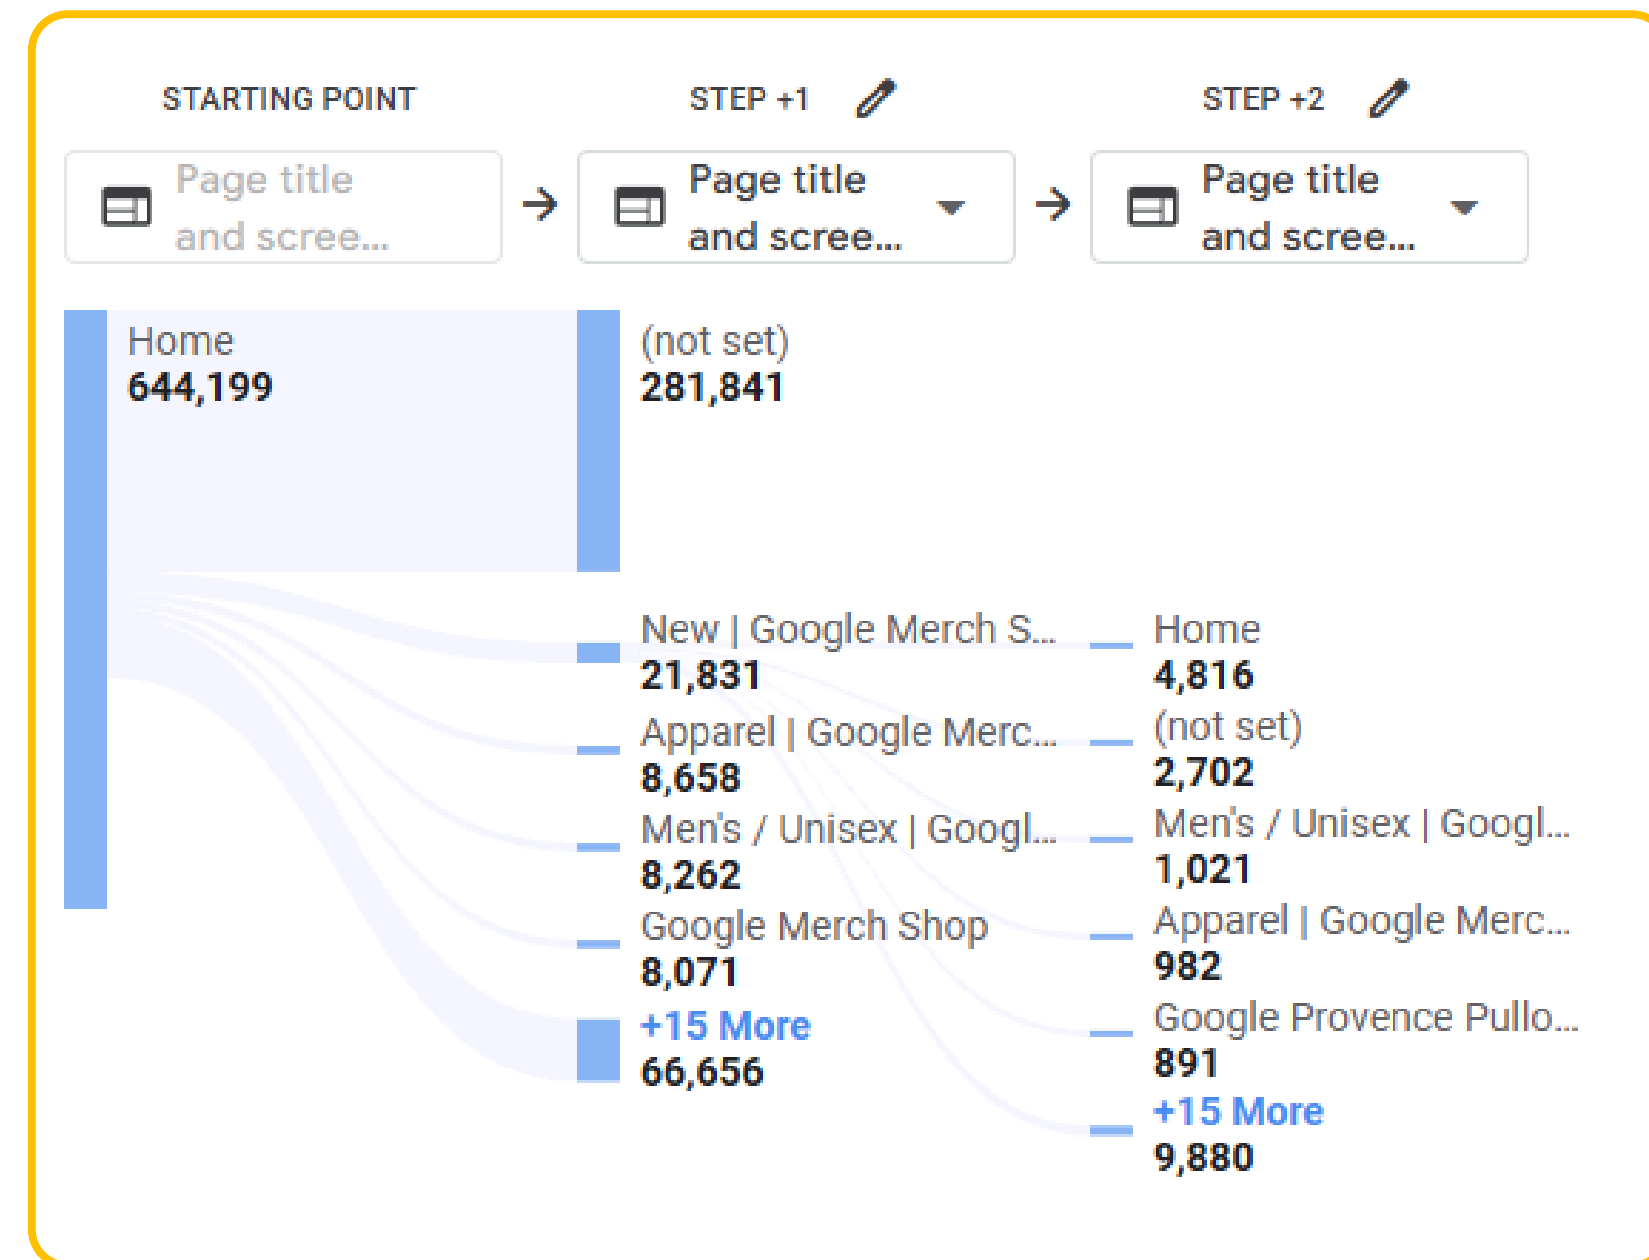

Fig.14. User navigation paths starting from the Home page

This behavioural path analysis shows how users navigate the store starting from the **Home page**, which is the main entry point for most sessions. From the Home page, users mainly move to category pages such as “**New**” and “**Apparel**”, indicating an exploratory browsing behaviour at the beginning of the journey.

Navigation patterns are mostly non-linear, with frequent switches between categories and occasional returns to the Home page. This suggests that users are browsing and comparing options rather than progressing directly towards product or checkout pages.

This behaviour may point to friction in the transition from category exploration to product consideration, highlighting opportunities to improve navigation clarity, product discovery, and guidance towards purchase-related pages.

Checkout Funnel Performance

Analyse how users progress through the e-commerce funnel and identify drop-off points

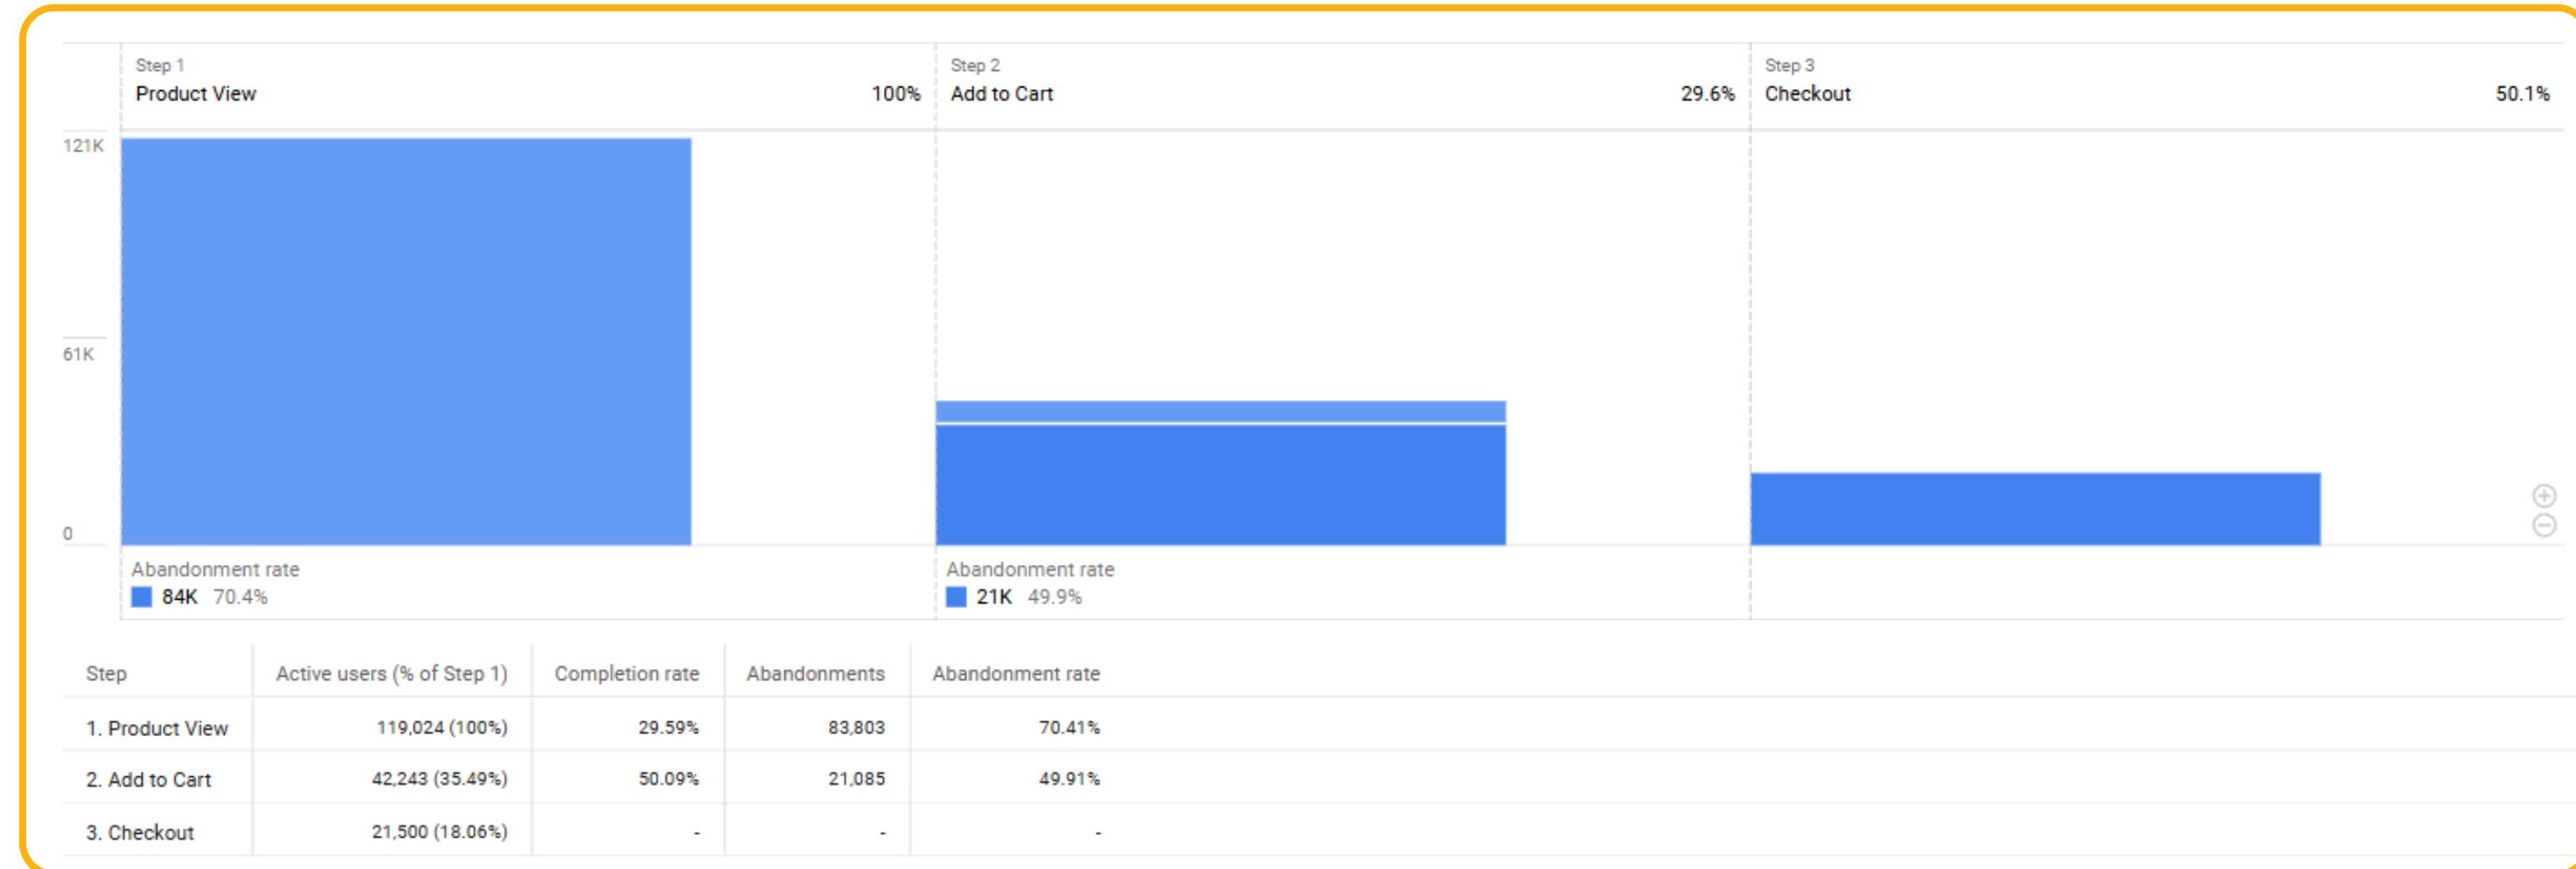

Fig.15. Overall e-commerce funnel performance from Product View to Checkout.

The funnel analysis shows that only around **30% of users move from Product View to Add to Cart**, indicating a significant drop-off at the early stage of the purchase journey. This suggests that although users view products, many do not feel motivated to continue.

In contrast, approximately **50% of users who add items to the cart proceed to Checkout**, showing stronger purchase intent at this stage. Overall, the largest friction point occurs at the Product View stage, highlighting potential issues related to product presentation, pricing, or user experience that may be limiting conversions.

Funnel Performance - Product category

Step		Segment	Active users (% of Step 1)	Completion rate	Abandonments	Abandonment rate
1	View item	Apparel Category	32,667 (100%)	40.56%	19,416	59.44%
		Men's /Unisex category	34,168 (100%)	40.99%	20,164	59.01%
		Sale category	30,966 (100%)	48%	16,102	52%
		Bags category	27,732 (100%)	37.91%	17,220	62.09%
2	Add to cart	Apparel Category	13,251 (40.56%)	57.3%	5,658	42.7%
		Men's /Unisex category	14,004 (40.99%)	61.93%	5,332	38.07%
		Sale category	14,864 (48%)	61.04%	5,791	38.96%
		Bags category	10,512 (37.91%)	60.55%	4,147	39.45%
3	Purchase	Apparel Category	7,593 (23.24%)	-	-	-
		Men's /Unisex category	8,672 (25.38%)	-	-	-
		Sale category	9,073 (29.3%)	-	-	-
		Bags category	6,365 (22.95%)	-	-	-

Fig.16. Funnel performance comparison across key product categories (Apparel, Men’s/Unisex, Sale and Bags).

This analysis compares funnel performance across **Apparel, Men’s/Unisex, Sale, and Bags** categories from **Product View** to **Purchase**. At the Product View stage, all categories show similar engagement, indicating comparable initial interest.

Differences become clearer at later stages. **Men’s/Unisex** and **Sale** categories show higher completion rates after **Add to Cart**, suggesting lower purchase friction. In contrast, **Apparel** and **Bags** present higher drop-off rates, likely due to greater decision-making complexity.

This behaviour highlighting opportunities to reduce friction in categories with higher abandonment.

Funnel Performance - Device Type

Step	Device category	Active users (% of Step 1)	Completion rate	Abandonments	Abandonment rate
1. Product View	Total	119,024 (100%)	29.59%	83,803	70.41%
	desktop	81,699 (100%)	33.04%	54,706	66.96%
	mobile	36,737 (100%)	21.76%	28,743	78.24%
	tablet	1,390 (100%)	17.91%	1,141	82.09%
	smart tv	14 (100%)	7.14%	13	92.86%
2. Add to Cart	Total	42,243 (35.49%)	50.09%	21,085	49.91%
	desktop	31,389 (38.42%)	53.53%	14,587	46.47%
	mobile	10,542 (28.7%)	40.54%	6,268	59.46%
	tablet	327 (23.53%)	36.7%	207	63.3%
	smart tv	1 (7.14%)	100%	0	0%
3. Checkout	Total	21,500 (18.06%)	-	-	-
	desktop	16,991 (20.8%)	-	-	-
	mobile	4,390 (11.95%)	-	-	-
	tablet	123 (8.85%)	-	-	-
	smart tv	1 (7.14%)	-	-	-

Funnel performance varies significantly by device type, with **desktop users showing higher completion rates across all stages of the funnel**. In contrast, **mobile users drop off earlier in the journey**, particularly at the **Product View stage**, where abandonment is the highest.

These results suggest that the mobile experience presents greater friction, potentially due to **UX design, usability, or performance limitations**, which may be negatively impacting conversion rates on mobile devices.

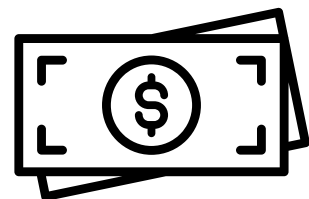

Fig.17. Funnel performance by device type across the e-commerce journey.

How is the online store performing?

E-commerce Performance

Overview of the financial health of the Google Merchandise Store (Jan–Oct 2025).

Total Purchase Revenue: \$2,014,100.16.
 Total Transactions: 12,649 completed orders.
 Average Order Value (AOV): \$159.23 per transaction.
 Calculation: $\$2,014,100.16 / 12,649$.

Key Trend: Revenue remained stable throughout the year, with a massive sales spike in late September reaching almost \$80k in a single day.

E-commerce purchases

12,649

↓ Purchase revenue

\$2,014,100.16

Fig.18. Number of E-commerce purchases and Purchase Revenue.

Fig.19. Total revenue per month.

Sales peaked on the 25th September with 31,877 items sold. The top sellers were the Super G Marine Layer Banks Hoodie (657), Google Black Eco Zip Hoodie (592), and Super G Unisex 1/4 Sporty Zip (563)

Top Performing Products & Categories:

10	Chrome Dino Collectible Figurines		4,314 (0.68%)	9,044 (1.72%)	864 (0.51%)	\$21,408.00 (1.02%)

Fig.20. Views and Revenue by item (top 10 items driving more revenue).

Best Sellers by Revenue:

- Google Campus Bike: ~\$35K
- Google Unisex Eco Tee (Black): ~\$33K
- Super G Marine Layer Banks Hoodie: ~\$33K

Dominant Category: **Apparel**, specifically Hoodies and Sweatshirts, represents the core of the store's financial performance.

The "Chrome Dino Collectible Figurines" show massive engagement with 9,044 Add-to-Carts

Underperformance & Conversion Gaps:

Low Conversion vs. High Views:

- Super G Timbuk2 Spire Jet Backpack: High visibility (6,091 views) but only 133 purchases.
- Super G Camp Fleece Black Pullover: 6,915 views but only 183 units sold.
- Despite high interest, the Chrome Dino Figurines have a high abandonment rate (only ~9.5% of items added to cart are eventually purchased).

These items suffer from "browsing without buying," suggesting potential issues with pricing or shipping costs for smaller items.

Item name	↓ Items viewed	Items added to cart	Items purchased	Item revenue

Fig.21. Views and Revenue by item (top 10 viewed items).

High-Value Segments: Geography & Devices

Where and how do the most valuable customers shop?

Geographic Concentration:

- USA: Dominates with 91.29% of total revenue (\$1.83M).
- Top Cities: New York (\$158k) and San Francisco (\$102k) are the primary hubs.

Device Performance Gap:

- Desktop: Responsible for 94.8% of revenue (\$1.91M).
- Mobile: Accounts for 27% of site traffic but only 5% of revenue.

User Types: Massive influx of New Users (692k) vs. Returning Users (106k), especially during the September peak.

Country	Total revenue	Average online active user engagement time
Total	\$2,014,100.16 100% of total	1m 17s Avg 0%
1 United States	\$1,838,626.02 (91.29%)	2m 16s
2 Canada	\$82,136.72 (4.08%)	1m 37s
3 Brazil	\$29,995.82 (1.49%)	1m 43s
4 Mexico	\$11,365.01 (0.56%)	2m 23s
5 Taiwan	\$8,956.62 (0.44%)	2m 38s

Fig.22. Total Revenue (top 5) and Average online active user engagement time by country

Town/City	Total revenue
Total	\$2,014,100.16 100% of total
1 New York	\$158,515.74 (7.87%)
2 San Francisco	\$101,921.71 (5.06%)
3 Chicago	\$75,511.25 (3.75%)
4 Mountain View	\$70,697.88 (3.51%)
5 Los Angeles	\$65,991.44 (3.28%)

Fig.23. Total Revenue by town (top 5).

Device category	Event count	Total revenue
All events		
Total	13,666,208 100% of total	\$2,014,100.16 100% of total
1 desktop	9,844,175 (72.03%)	\$1,909,325.13 (94.8%)
2 mobile	3,705,232 (27.11%)	\$101,040.13 (5.02%)
3 tablet	112,560 (0.82%)	\$3,734.90 (0.19%)
4 smart tv	4,241 (0.03%)	\$0.00 (0%)

Fig.24. Total Revenue by device.

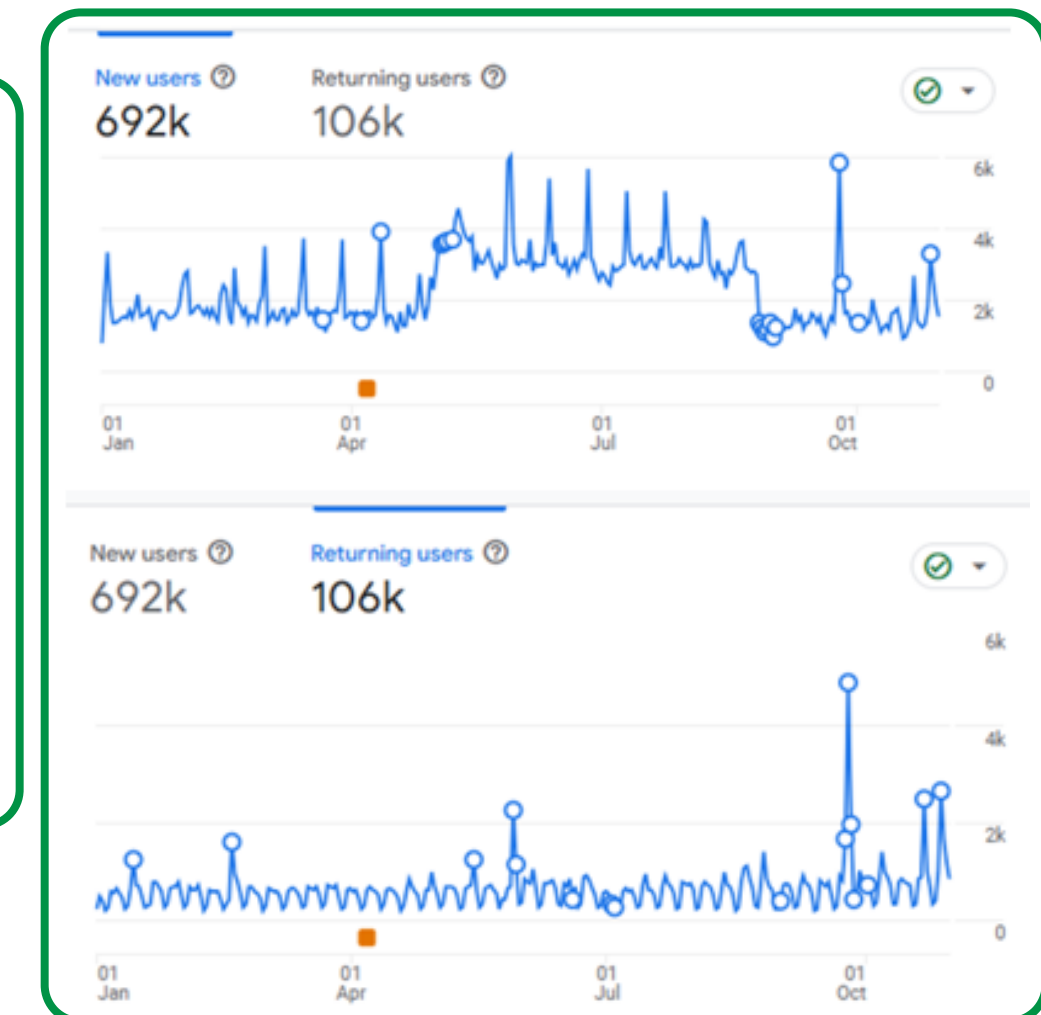

Fig.25 & 26. New users and Returning users.

~91% of revenue is concentrated in the US (led by NYC and SF), but Taiwan offers the highest quality browsing time (2m 38s).

Framework Review

Maximize Conversions

The analysis identifies a critical 70.4% drop-off at the Product View stage, indicating that while users are reaching the site, the transition into the "buying process" requires urgent optimization of Product Detail Page (PDP) layouts and call-to-actions.

Increase Awareness

The analysis suggests shifting marketing spend toward high-quality browsing markets like Taiwan, which boasts the site's longest session durations, while reducing over-dependence on the US market.

Create Loyalty

Although returning users account for only 15.4% of traffic, they are significantly more valuable, viewing 18.35 pages per session and spending more time on the check-out page; a strategy that focuses on leveraging this loyalty through targeted promotional bundles during peak seasonal windows like Black Friday has the potential to increase loyalty and return users but also increase frequency and customer lifetime value.

Increase Engagement

Current session engagement stands at 52 seconds, falling short of the 1-minute target; this goal can be achieved by resolving the mobile UX friction where engagement time is currently a mere 27 seconds compared to desktop's 1m 14s.

Target Audience Growth

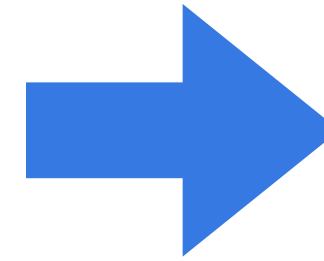

To reach the specific target of 100,000 female users, the store must address the fact that the Women's category currently ranks only 9th in the Female engagement analysis, showcasing the need to improve this section to increase appeal for this segment.

Insights & Recommendations

Top Priority

Data Integrity and Technical Performance (Tags/UX)

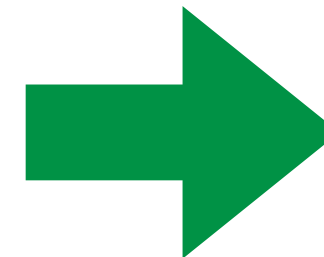

There is a significant presence of "Junk Traffic," with 28% of users classified as "(not set)" showing zero interaction. Plus, a massive spike of 40,000 users on June 2nd, mostly landing on these unassigned pages, strongly suggests a GA4 tracking or tagging error rather than organic growth.

Conduct a comprehensive audit of GA4 tags and the analytics framework to ensure accurate data collection. Implement page load time tracking, which is currently missing, to determine if technical latency is driving the high bounce rates.

Funnel Friction and User Journey

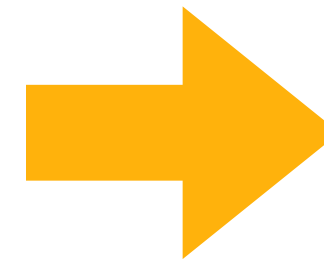

The largest "leak" in the sales funnel occurs at the Product View stage, where 70.4% of users abandon the journey before adding any items to their cart. Additionally, the Home page has a high bounce rate (51.63%), indicating it fails to effectively direct users deeper into the site.

Streamline the Home page by highlighting popular products and promotions directly on the landing page to move users past the initial "view" stage. Test new layouts and Call-to-Actions (CTAs) specifically on the Product Detail Pages (PDP) to encourage users to move from "viewing" to "adding to cart".

Target Audience and Demographic Blind Spots

75% of users are classified as "Unknown" gender, creating a major blind spot for mapping customer personas, however, within the known 25%, there is a 3:2 male-to-female ratio. Plus, Women's category ranks 9th in the Female Engagement Analysis (three pages behind Men's/Unisex) suggesting a lack of appealing inventory or poor visibility for female-focused products.

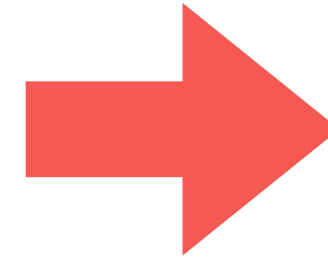

To reach the goal of 100,000 female users, the store must expand the Women's product line and make these items easier to find. Plus, use progressive profiling to reduce the "Unknown" segment by collecting voluntary user attributes over time to improve targeting.

Insights & Recommendations

Medium Priority

User Acquisition and Retention

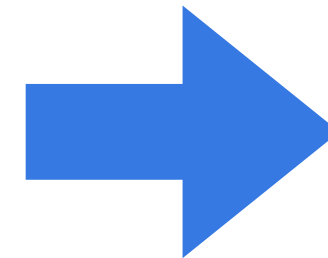

The store successfully attracted 692K New Users, but Returning Users (106K) represent a small fraction of the total base.

Introduce a first-purchase welcome discount to convert new traffic immediately and launch a loyalty program to increase the lifetime value of existing customers.

Conversion Gaps and Cart Recovery

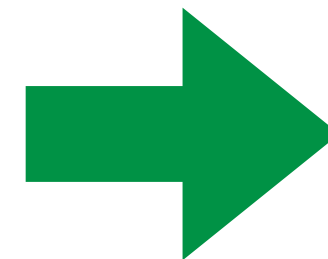

High-interest items like the Timbuk2 Backpack (6k+ views) and Dino Figurines (9k+ cart additions) suffer from low final conversion rates.

Add social proof (reviews/videos) to product pages and launch cart recovery incentives to convert high browsing interest into completed sales.

Mobile Revenue Gap & AOV

Mobile accounts for 27.1% of traffic but only 5.02% of revenue, while the current AOV stands at \$159.23.

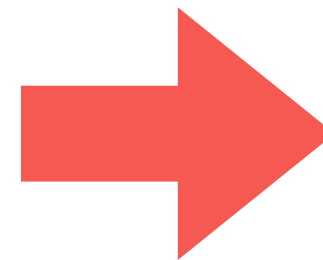

Streamline the mobile checkout process and implement a \$180 free shipping threshold to incentivize higher per-transaction spending.

Insights & Recommendations

Low Priority

Device Performance Gap

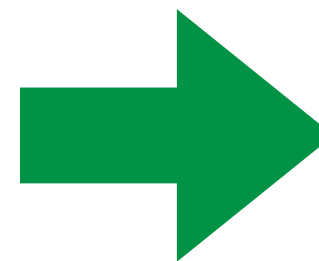

There is a severe disparity between devices; Desktop users engage for 1m 14s with a 58.5% engagement rate, whereas Mobile users stay for only 27 seconds with a 32.8% engagement rate. Even though mobile user equate for half of the visit volume, the quality of these sessions remains low, indicating a friction-heavy mobile interface.

Execute a mobile-first UX redesign specifically targeting the "discovery-to-purchase" transition. Simplify mobile navigation to prevent the rapid 27-second drop-off and ensure the checkout process is optimized for smaller screens

Geographic Behavioral Trends

The United States drives the most engagement, but Taiwan provides the highest quality browsing with an average session of 2m 38s. Conversely, China has a critical interaction time of only 15 seconds, likely due to technical accessibility issues or severe cultural barriers.

Prioritize marketing spend in Taiwan to capitalize on high-quality browsing. Investigate technical barriers in China and better adapt content for the Indian market, which currently remains below the global engagement average
